

INSTALLATION INSTRUCTIONS

For any further information please contact
Bathstore on: **0845 873 8843**

Or visit our web-site at www.bathstore.com

The manufacturer reserves the right to make technical
modifications without prior notice.

INTRODUCTION

Please read these instructions carefully and keep in a safe place for future reference.

General Installation Requirements

The installation must comply with regulations of the Local Water Authority as contained in their bylaws.

Minimum/Maximum working pressure

These taps are suitable for high and low pressure installations. The maximum water pressure is 6 bar (note: mains cold water is normally supplied at between 2 and 3 bar). For installations where the mains pressure exceeds 6 bar a pressure reducing valve should be fitted.

Approvals

All products are manufactured using materials tested and approved under the Water Bylaws Scheme and comply with requirements of British Standard 5412: 1996 where applicable. These hints have been prepared for your guidance, you must exercise due care at all times. We do not accept responsibility for any problems that may occur through incorrect installation.

CLEANING

The chrome and gold plate we use on our taps is very durable, nevertheless care should be taken when cleaning them. They should be cleaned only with warm soapy water followed by rinsing with clean water and drying with a soft cloth. All finishes are vulnerable to acid attack and some strong substances such as household cleaners, disinfectants, denture cleaners, hair dyes, wine making and photographic chemicals can cause the surface to go black or peel.

DIMENSIONS

NOTE: ALL DIMENSIONS IN MILLIMETRES

INSTALLATION

First shut off your water heating system then, with your mains stop cock closed, open the lowest hot and cold taps in the house and allow to run until the cold storage tank and pipes are empty (the hot water storage cylinder always remains full).

Fitting isolating valves to the inlet feeds is recommended for ease of maintenance.

INSTALLATION

! Remember to turn off the mains water supply before connecting to any existing pipe work.

! Flush through the supply pipes in order to remove any remaining swarf, solder or other impurities. Failure to carry out this simple procedure could cause problems or damage to the workings of the mixer.

Identify the hot tap and position into the bath on the left hand, from the underside of the bath fit the rubber washer and then the nut.

Making sure the tap is in the right position tighten the nut to secure the tap to the bath.

NOTE - DO NOT over tighten the nut as might damage the bath.

Repeat this procedure for the cold tap on the right hand side.

Finally connect the supply pipes to the taps. (hot on the left and cold on the right).

ATTENTION

Having first checked all new connections, turn on the mains stop cock, close all taps except the new mixer and as the system starts to refill check for leaks.

Once you have satisfied yourself that there are no leaks, switch on the water heating.
